

# Developer Advisory

## “One Stop Shop” for RSS Proof of Concept

This is only a proof of concept.

---

### Creating RSS

- Movable Type – create and edit RSS articles

### Pull and Push RSS Feeds

- Using a method similar to the Adam Curry and The Gaming Report web sites, we are creating an interface that will take you step-by-step through the process of
  - finding an RSS feed,
  - selecting a display option,
  - selecting size parameters,
  - creating a JavaScript routine,
  - and showing you how to paste it into your HTML page for display.

### Built-in Users Manual

- All the steps for utilizing Movable Type, the Aggregator, and the JavaScript creator will be documented and integrated into the application as a popup help file.

### Current Status of Project

- Purchased license for Movable Type.
- Installed it on an isolated Linux box.
- Created some RSS news feeds on the eDG.
- Created a non-working prototype for the proof of concept application for RSS.

### What's Next?

- Finish coding and test prototype.
- Show prototype to management.
